Homework 2 Summary

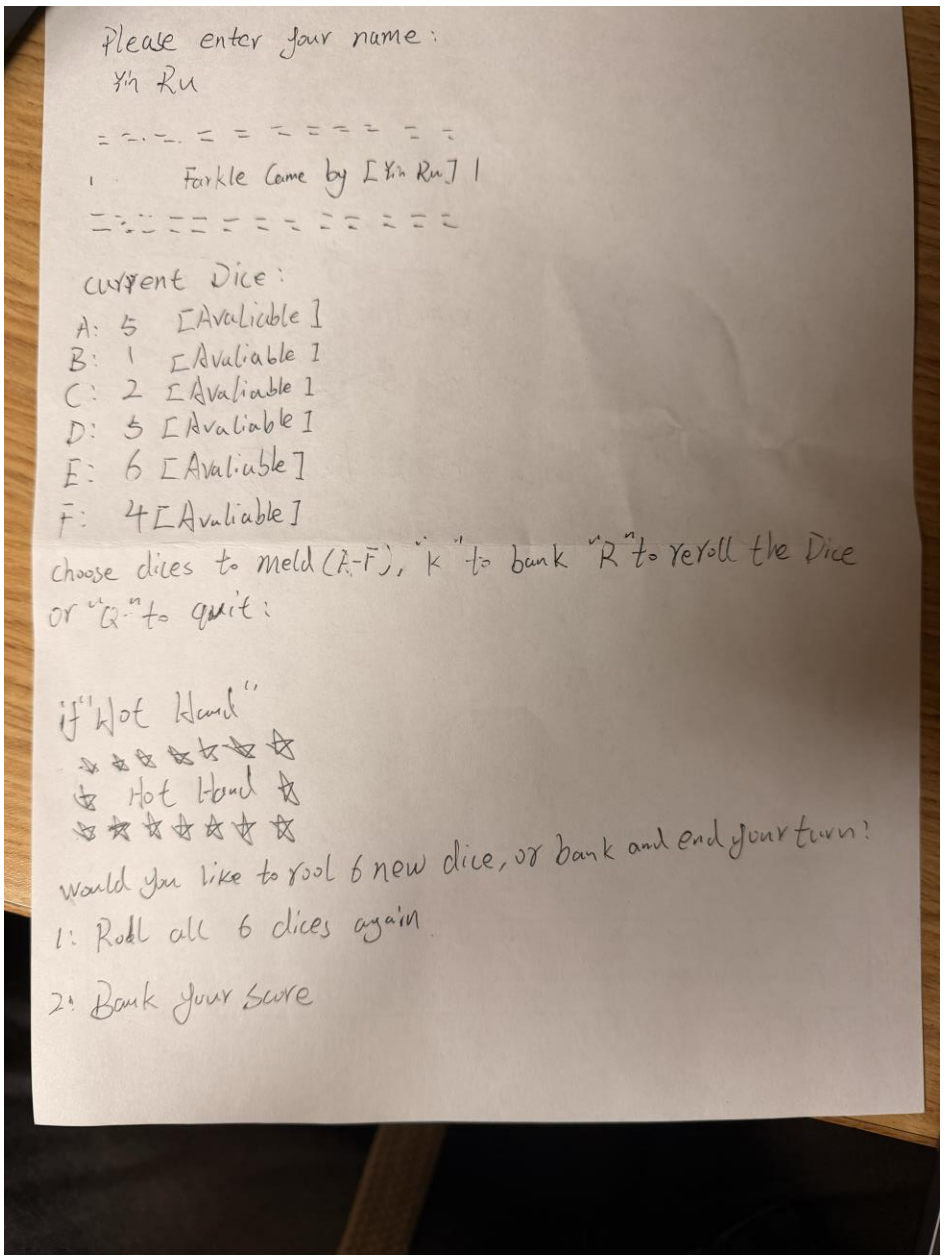

Yin Ru

SPCS224

1. Purpose

   The purpose of this homework creates a Farkle Game, user could roll the dice, choose the dice combination that follow the scoring rules that earn points, and decide whether to continue the game check the current score or quit the game,

2. Design Overview
   The beginning of the program, game title will display, and the user could input the username to start the game. Then the Farkle Game will roll six random dice, user could choose dice to earn the score. If Farkle, the current score of this round will be 0, and if all six dices have score, it will be “Hot Hand”
3. Sketch
   The main menu and the “Hot Hand”

4. Unit Testing
   I used Junit to test the Farkle Game, I tried different combinations like straight, three pair and Farkle
5. Challenges and Solutions
   Setting up Junit is a hard thing to me because I never use it to test code. So I go to YouTube to learn how to set it up
6. Retrospective
   This project helps me better understand the java programming and how to use array loops and conditions in large programming.
